Pinja Wood Stain

DESCRIPTION
A water-borne priming oil / semi-transparent wood stain for exterior wooden surfaces providing translucent colorful protection for wood.

PRODUCT FEATURES AND RECOMMENDED USES
• A water-borne priming oil/low film forming semi-transparent stain with a wide range of colors. The stain dries fast and is therefore suitable for industrial painting lines
• Forms transparent, colorful protection against moisture, sunlight and dirt. Cracking of wood is decreased, and the surface retains its beauty for a longer time
• Highlights the natural look of wood.
• 2 in 1 product: can be used as a priming oil and/or a wood stain
• Recommended for use on wooden window frames, doors, claddings, panels and other wood surfaces

Drying and recoating times are related to the film thickness, temperature, the relative humidity of the air and ventilation.

Gloss

Matt.

Color shades

Clear. Akvi Tone tinting according to the Translucent Wood Finishes Colour Card. Avatint tinting system.
Pinja Wood Stain

APPLICATION INSTRUCTIONS

Surface preparation
Clean surfaces from dirt, dust and loose material. Assure that surface is free from mold and blue stain.

Recommended topcoats
Pinja Wood Stain, Pinjalac HB, Pinja Flex 30, Ultra Pro, Pinja Pro, Pinja Top, Pinja Color Plus, Pinja Flex Combi 25, Pinja Flex Combi 35.

Application conditions
The surface to be treated has to be clean and dry. The moisture content of wood has to be below 20%. During application and drying temperature of the air, substrate and product must be over +18°C and relative humidity of the air below 70%. Good ventilation is required to ensure optimal result. Product can be dried with or without oven.

Application
Stir the product carefully before use. Avoid making foam. The product is recommended to be used without thinning but can be thinned with water if necessary. Let the product settle down for a while before use.

For airless spraying: nozzle tip 0.009”–0.011” is recommended to be used with pressure of 80–160 bar. Spray angle shall be chosen according to the shape of the object.

For air-assisted airless spraying: nozzle tip 0.009”–0.011” is recommended to be used with pressure 40–120 bar. Atomising air pressure should be about 1–3 bar. Spray angle shall be chosen according to the shape of the object.

For conventional spraying: nozzle tip 1.0–1.4 mm is recommended to be used with pressure 1.5–3 bar.

For dip and flow coating product is ready to use.

Wood contains resin and other colouring extractives especially in knots. Temperature and humidity fluctuations may cause paint coat discolouration in these areas.

Thinners
Water

Cleaning of equipment
Water.

VOC
The Volatile Organic Compounds amount is 10 g/litre of wood stain.

HEALTH AND SAFETY
Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets.
A health and safety data sheet is available on request from Tikkurila Oyj.
