Pinjadur 30

DESCRIPTION
A two-component, water-borne polyurethane topcoat.

PRODUCT FEATURES AND RECOMMENDED USES
• An ideal solution for the most demanding environmental conditions. The product has been tested according to EN 927 with outstanding results. The paint is proven to have a very low water permeability when exposed to outdoor use. It is, therefore, an excellent choice for exterior doors and windows.
• Repels dirt on the surface, thus helping it retain its appearance. The paint has been especially developed for exterior wooden surfaces such as doors and window frames.
• Forms an even and tight film, which protects the surface from resin and knot bleeding. The color of the surface remains even and flawless.
• A durable, easy to clean and non-chalking topcoat.
• Excellent gloss and colour retention in climatic stress.
• Can be cured at higher temperatures.
• Suitable for fibre cement flat sheet and wooden surfaces in exterior premises.

TECHNICAL DATA

| Volume solids | 43±2% |
| Weight solids | 58±2% |
| Specific gravity | Approx. 1.3 kg / l mixture |
| Mixing ratio | Base 4 parts by volume Pinjadur 30 Hardener 1 part by volume 008 7606 (fast) or 008 7605 |
| Pot life (+23°C) | 2 hours |

Recommended spreading amounts and theoretical coverage

</table>

Drying and recoating times are related to the film thickness, temperature, the relative humidity of the air and ventilation.

Gloss
Semi-matt.

Color shades
RAL, NCS, SSG, BS, MONICOLOR NOVA and SYMPHONY colour cards. Temaspeed Fonte tinting.

Pinjadur 30
APPLICATION INSTRUCTIONS

Surface preparation
Clean surfaces from dirt, dust and loose material. Assure that surface is free from mold and blue stain. Wood surfaces must be sanded with sandpaper P150–320. Sanding prior to the next application with sandpaper P240–400. All sanding dust must be removed.

Recommended primers
Akvi Primer Pro, Fontecoat EP 50, Pinjadur Primer.

Recommended topcoats
Pinjadur 30.

Application conditions
The surface to be treated has to be clean and dry. The moisture content of wood has to be below 18%. During application and drying temperature of the air, substrate and product must be over +15°C and relative humidity of the air below 80%. Good ventilation is required to ensure optimal result. Product can be dried with or without oven.

Mixing components
First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating.

Application
For air-assisted airless spraying, the product is thinned approximately 0–10% to the viscosity 30–70s (DIN4). Recommended nozzle tip is 0.011”–0.013” and pressure 160–200 bar. Atomising air pressure should be about 1–2 bar. Spray angle shall be chosen according to the shape of the object.

For conventional spraying, the product is thinned approximately 3–10% to the viscosity 30–50s (DIN4). Recommended nozzle tip is 1.4–1.8 mm and pressure 3–4 bar.

Wood contains resin and other colouring extractives especially in knots. Temperature and humidity fluctuations may cause paint coat discolouration in these areas.

Thinners
Water

Cleaning of equipment
Water or Thinner 1109.

VOC
The Volatile Organic Compounds amount is 140 g/litre of paint.

VOC content in paint (mixed 10% of water) is 130 g/litre of paint.

HEALTH AND SAFETY
Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets.
A health and safety data sheet is available on request from Tikkurila Oyj.
