Temafloor AC502

DESCRIPTION

A two-component, solvent-free, elastic acrylic binder.

PRODUCT FEATURES AND RECOMMENDED USES

- Used as a binder for Temafloor AC acrylic troweling screed
- Suitable to be used as a self-levelling coating and as a binder of a coloured sand screed
- Suitable also for indoor asphalt floors
- Mixed with sand also suitable for patching of concrete floors
- Cures fast also in low temperatures
- Recommended for the floors of engineering workshops, warehouses, cold stores of food industry parking deck surfaces, loading ramps and terraces

TECHNICAL DATA

Volume solids approx. 100%

Specific gravity 0.98 kg /l (ready made mixture)

* Temperature of the binder, air and the floor.

Self-levelling screeds 5–6 mm:
Temafloor AC502 30 w-%
Coloured sand Ø 0,1–0,6 mm 30 w-%
Coloured sand Ø 0,3–0,8 mm 40 w-%
Surface is fully broadcast with coloured sand Ø 0.6–1.2 mm.

Possible hardeners BP-50-FT, Perkadox®CH-50 or PEROXAN BP-Pulver 50 W.

Practical coverage

For a flat substrate:
2 mm layer: 2 litres ready for use screed / m²
6 mm layer: 6 litres ready for use screed / m²
Practical coverage depends on the evenness of the substrate.

Cleaning of equipment

Thinner 006 1400.

Finish

Semi-matt.

Colors

The colour of the screed is determined by the sand used.

Thinning instructions

Do not thin.

VOC

VOC 2004/42/EC (cat A/j), 500 g/l (2010)
Temafloor AC502: max. VOC < 500 g/l.

Can sizes

20,0 L, 200,0 L
Temafloor AC502

APPLICATION INSTRUCTIONS

Surface preparation
New concrete: Remove laitance by power grinding, vacuum grit blasting or hydrochloric acid etching. Choose the method best suited for the premises. After grinding remove dust carefully with a vacuum cleaner. Hydrochloric acid etching is carried out with diluted hydrochloric acid (1 part concentrated hydrochloric acid, 4 parts water). Rinse with plenty of water. Dry the floor.

Old concrete: Remove all grease, oil, chemicals and other impurities by Maalipesu detergent. Remove old peeling paint layer by grinding, milling or vacuum grit blasting. Choose the method best suited for the premises. Clean out pot-holes removing all loose friable material. Open cracks with e.g. an abrasive tool. Remove loose material and dust.

Application conditions
The relative humidity of the concrete should not exceed 97%. The temperature of the ambient air, surface or coating should not fall below +5°C during application or drying. Relative humidity of air should not exceed 80%.

Mixing components
First stir base and hardener separately. Mix the correct proportions of base and hardener thoroughly (approx. 2 minutes to get homogenous mixture) by using a low speed industrial hand drill with a paddle. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface, weaken the properties of the coating and risk the success of the application.

Priming
Prime using Temafloor AC102 Primer. Pour the primer mixture onto the floor and apply by the trowel or roller as much as is needed to impregnate the concrete surface. If necessary, repeat priming to get a non-porous surface. A porous priming coat will result in holes and air bubbles in the finished coating. Subsequent treatment can be carried out after 30 min.

Scatter sand of grain size Ø 0,4–0,8 mm on the fresh primer coat to ensure the screed adhesion and prohibit gliding of the screed.

Patching
Patch pot-holes and cracks with a mixture of unthinned Temafloor AC502 and dry, clean sand. Mixing ratio e.g. 1 part by volume of varnish mixture and 1–2 parts by volume of sand of grain size 0.1–0.6 mm. Sand the patched areas before overcoating, if necessary.

The floor can be levelled by using Temafloor AC502 and sand of grain size 0,5–1,2 mm.

Note! Concrete surface should always be primed before patching.

Screed
Pour the Temafloor AC502 mixture onto the floor. Apply by an adjustable trowel to the desired thickness. Trowel the screeded surface by hands or use broadcasting technique.

Topcoating
Topcoating can be carried out after the screed has cured. Topcoating can be carried out with Temafloor AC602 Clear topcoat. Pour the varnish mixture onto the floor, apply with a rubber trowel and level with a roller.

Note! Add the remaining mixture to the next batch of the product, do not scrape it out of the container onto the floor.

HEALTH AND SAFETY
Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets.
A health and safety data sheet is available on request from Tikkurila Oyj.

The above information is not intended to be exhaustive or complete. The information is based on laboratory tests and practical experience, and it is given to the best of our knowledge. The quality of the product is ensured by our operational system, based on the requirements of ISO 9001 and ISO 14001. As manufacturer we cannot control the conditions under which the product is being used or the many factors that have an effect on the use and application of the product. We disclaim liability for any damages caused by using the product against our instructions or for inappropriate purposes. We reserve the right to change the given information unilaterally without notice.

The product is intended for professional use only and shall only be used by professionals who have sufficient knowledge and expertise on the proper use of the product. The information above is advisory only. To the extent permitted by applicable law, we shall not approve of any liability for the conditions under which the product is being used or for the use or application of the product.

In case you intend to use the product for any other purpose than that recommended in this document without first getting our written confirmation on the suitability for the intended use, such use takes place at your own risk.
**Temafloor AC502**

The European harmonized product standard EN 13813:2002 defines the requirements for Screed materials and floor screeds, including synthetic resin screeds.

This product is tested and CE-labelled in accordance with the tables ZA.1.5 and ZA.3.3 in the appendix ZA.3.
