**Temathane 50**

**DESCRIPTION**
A two-component, semi-gloss polyurethane paint, hardener aliphatic isocyanate.

**PRODUCT FEATURES AND RECOMMENDED USES**
- Good solution when a cost-efficient solution with good gloss and color retention is required
- Dries rapidly and is easy to apply
- Recommended to be used as a semigloss topcoat for epoxy and polyurethane systems exposed to weathering
- A durable, easy to clean and non-chalking topcoat
- Excellent weathering and abrasion resistance
- Recommended for painting of outside of storage tanks, steel buildings and other steelwork

</table>

Drying and recoating times are related to the film thickness, temperature, the relative humidity of the air and ventilation.

**Gloss**
Semi-gloss.

**Color shades**
RAL, NCS, SSG, BS, MONICOLOR NOVA and SYMPHONY colour cards. Temaspeed Premium tinting
Temathane 50

APPLICATION INSTRUCTIONS

Surface preparation
Primed surfaces: Oil, grease, salt and dirt are removed from the surface by appropriate means. Repair any damage to the primer coat. Note the overcoating time of primer. (ISO 12944-4)

Recommended primers
Temacoat GPL-S Primer, Temacoat GPL-S MIO, Temacoat RM 40, Temacoat Primer, Temacoat SPA Primer, Temabond ST 200, Temabond ST 300, Temabond WG 200, Temadur 20.

Recommended topcoats
Temadur 50, Temadur 90, Temadur Clear, Temadur HB 50, Temadur HB 80, Temadur HS 90, Temadur SC-F 20, Temadur SC-F 50, Temadur SC-F 80, Temathane 50, Temathane 90, Temathane PC 50, Temathane PC 80.

Application conditions
All surfaces must be clean, dry and free from contamination. The temperature of the ambient air, surface and paint should not fall below +5ºC during application and drying. Relative humidity of the air should not exceed 80% during application and drying. The surface temperature of steel should remain at least 3°C above the dew point. Good ventilation and sufficient air movement is required in confined areas during application and drying.

Mixing components
First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating.

Application
In order to obtain an even, non-porous finish, spray a misty coat: first a thin layer, then let the solvents evaporate for 5–30 minutes and then apply the full coat.

For airless spraying, the product is thinned depending on the temperature of the components (base, hardener, thinner) approximately 10–15% to the viscosity 30–60s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 120–160 bar. Spray angle shall be chosen according to the shape of the object.

For conventional spraying, the product is thinned depending on the temperature of the components (base, hardener, thinner) approximately 10–15% to the viscosity 20–25s (DIN4). Recommended nozzle tip is 1.6–1.8 mm and pressure 3–4 bar.

For brush application product should be thinned according to the circumstances.

Thinners
Thinner 1048, Thinner 1067, Thinner 1061

Thinner 1061 is also suitable for conventional spraying.

Cleaning of equipment
Thinner 1048, 1067 or 1061.

VOC
The Volatile Organic Compounds amount (ISO 11890) is 425 g/litre of paint mixture. VOC content of the paint mixture (thinned 15% by volume) is 490 g/l.

HEALTH AND SAFETY
Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets. A health and safety data sheet is available on request from Tikkurila Oyj.
