Temanyl GF

**DESCRIPTION**
A two-component glass flake reinforced vinyl ester acrylic co-polymer heavy duty coating/lining.

**PRODUCT FEATURES AND RECOMMENDED USES**
- To be used in immersion environments where superior resistance to chemical stress and high temperature is required. Resists crude oil up to +90°C, formic, acetic, lactic, maleic and phthalic acid and sulphuric, phosphoric, nitric and perchloric acid.
- Resistant to variety of alcohols, ketones and other solvents, wet and dry sulphur dioxide and trioxide fumes, black and white liquor (pulp mill). Temperature resistance +100°C in sea water. Especially developed for long-term, economical protection of storage tank.
- Provides outstanding protection for internal lining for offshore, onshore and buried tanks and pipes subject to extreme chemical exposure and mechanical wear. Instead of a multi-layer system, only 1-2 coats are required but the achieved durability is the same. These properties result in cost-savings throughout the entire lifetime of the coated surface.
- Surfaces coated with Temanyl GF can be taken into use 72 hours after application. Less downtime is a remarkable benefit.
- Also used in aggressive atmospheric or spillage conditions (secondary containment).
- Separate chemical resistance list available.
- Suitable to be for internal lining for offshore, onshore and buried tanks and pipes subject to extreme chemical exposure and mechanical wear.

</tbody>
</table>

Additional inhibitor may be used during application at high ambient temperatures. The inhibitor must be added and mixed in prior to the peroxide. Adding inhibitor after the peroxide will ruin the product.

**Pot life**
30–45 minutes (+20°C). May vary depending on temperature, and by use of inhibitor.

</table>

Full cure 3–4 days at +23°C. May be immersed in many environments after 24 hours. Drying and recoating times are related to the film thickness, temperature, the relative humidity of the air and ventilation.

In extreme environments it is recommended that the full coating system is post cured at +60–80°C with dry heat for 6 hours. For detailed instructions contact Tikkurila Technical service.

**Gloss**

Rough, glossy.

**Color shades**

Beige.
Temanyl GF

APPLICATION INSTRUCTIONS

Surface preparation
Oil, grease, salts and dirt are removed by appropriate means. (ISO 12944-4)
Steel surfaces: Blast clean to grade Sa2½. (ISO 8501-1) The surface profile must be minimum 50µm. (ISO 8503-2)

Recommended primers
Temanyl GF.

Recommended topcoats
Temanyl GF.

Application conditions
All surfaces must be clean, dry and free from contamination. The temperature of the ambient air, surface and paint should not fall below -5°C during application and drying. Relative humidity of the air should not exceed 80% during application and drying. The surface temperature of steel should remain at least 3°C above the dew point and not more than +20°C above the paint temperature. Good ventilation and sufficient air movement is required in confined areas during application and drying. Paint temperature should be above +15°C (to achieve good spray pattern), and below +30°C (relatively fast curing reaction shortening the pot life). If material temperature is higher separate inhibitor should be used.

Mixing components
First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating. Use the paint immediately after mixing. If left standing the heat of chemical reaction will shorten the practical pot life considerably. If temperature of the paint mixture exceeds +50°C during application, stop painting and flush the equipment.

Application
For airless spraying, the pump should be of 45:1 or greater. Fit leather and PTFE seal combination and remove all fluid filters. 10mm diameter (3/8") nylon lined hose with 6mm whip end, large bore gun with reverse clean spray tip. Recommended nozzle tip is 0.029”–0.048” and pressure approx. 200 bar. Size of nozzle and fan angle will vary depending on the nature of the work. Spray angle should be 45°–60°. Use “wet-on-wet” technique with film thickness 500–2000 µm.

Thinners
Do not thin.

Cleaning of equipment
Thinner 1031, MEK and MIBK (before coating has gelled, immediately after application).

VOC
The Volatile Organic Compounds amount is 15 g/litre of paint.

HEALTH AND SAFETY
Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets.
A health and safety data sheet is available on request from Tikkurila Oyj.
